## **Female Federal Sentencing Trends 2000 - 2021**

#### Introduction

Criminal sentencing is complex. For example, an officer has discretion about who gets a speeding ticket; prosecutors have discretion about what charges are brought, and judges often have latitude on sentencing outcomes. How bias operates at each stage is an artifact of sentencing data.

This study extends our analysis of the experiences of females with the federal criminal system by focusing on trends in prison sentencing. This study will juxtapose the findings below with what we observe from our analysis of the sentencing data.

## "Female Federal Arrests and Booking Trends 2000-2021"

## Key findings:

- 1. Although federal arrests of females trended upward overall, each demographic of females (Asian, Black, Native American, White) experienced its own unique trends.
- 2. Females' top 4 leading offense types are immigration offenses, drug offenses, property offenses, and supervision violations. While property offenses, drug offenses, and supervision violations either decreased or remained flat over the period, immigration offenses increased significantly before the pandemic.
- 3. Citizenship status highlights key differences in the arrest trend for White females. Before Covid-19, Non-citizen White female arrests were increasing, while US citizen White female arrests remained relatively flat.
- 4. Increases and decreases in the trend for immigration offenses appear to be influenced by national political party governance.

www.wiserpolicyorg

In addition to providing a descriptive analysis of the data, we examine how ethnicity affects the rates of who gets sentenced to (probation vs. prison) for White females

specifically. This shows if there is a difference in sentencing outcomes for Hispanic versus Non-Hispanic White females.

The data for this study comes from the US Sentencing Commission's monitoring database. Race is defined as the race of the sentenced offender (Asian/Pacific Islander, Black, Native American, and White), and ethnicity is defined as Hispanic/Non-Hispanic. A citizen is defined as a US citizen or non-US citizen. We examine the following questions:

- 1. Has sentencing experienced similar inclines and declines as arrests and bookings?
- 2. Are there disparities in the racial representation of females sentenced compared to those arrested?
- 3. Are there disparities in the racial and ethnic representation of the different types of sentences received (probation only, prison only)?

#### **Female Sentencing Trends**

Graph 1 shows the total number of women arrested and sentenced from 2000 to 2021. Since everyone arrested is not always found guilty or charged with a crime, fewer females were sentenced than arrested for each year over this period. Additionally, the trend for females sentenced was much flatter and less volatile than the trend for females arrested.

Several factors may explain these findings. First, the difference in arrests and sentencing could be a function of court capacity constraints, i.e., only a set number of cases can be heard each year. Second, charges could have been dropped, or the defendant could have been found not guilty. (Unfortunately, the data collected on defendants charged in criminal cases does not allow us to analyze 'charges dropped' or 'not guilty verdicts' by gender or race.) Finally, the flatter line could be the function of both of these reasons and the fact that <u>97% of federal cases</u> are closed by a plea deal.

Graph 1: Females Arrested vs. Sentenced Comparison 2000 - 2021

Disaggregating the female sentencing data by race, we find that White females, on average, were 70 percent of females sentenced, followed by Black females at 24 percent. Asian/Pacific Islander and Native American females each represented about 3 percent of the females sentenced. (See Chart 1.)

Chart 1: Average Percent of Females Sentenced by Race (2000 – 2021)

Calculations by the Females' Institute for Science, Equity and Race. Data Source: US Sentencing Commission (USSC)—Monitoring Data Base

#### Sentences: Fines, Probation, and Prison

To identify how each demographic of females was sentenced, we disaggregated the data by the type of sentence imposed (fine only, probation, or prison). We isolated our discussion on the trend of women who received 'fines only' due to the relatively low quantities compared to probation and prison sentences. Graph 2 shows that over this period, the number of females sentenced to a fine, range from a low of 21 to a high of 97. In addition, the trend is erratic over this period and displays no patterns.

**Graph 2: Females Sentenced to a Fine Only**

Native American

1 50%

Graph 3 compares females sentenced to probation or prison and shows an uptick in the number of females sentenced to prison sentences and a slow, steady decline in the number of females sentenced to probation.

for Science, Equity and Race. Data Source: US Sentencing Commission (USSC)—Monitoring Data Base

Asian/Pacific Islander
4.10%

Black
28.50%

White
56.41%

Native American
3.25%

Chart 3: Average Percentage of Females Sentenced to Probation by Race (2000 – 2021)

Calculations by the Women's Institute for Science, Equity and Race. Data Source: US Sentencing Commission (USSC)—Monitoring Data Base

Charts 3 and 4, respectively, show the average percentage of females sentenced to probation and prison. The average percentage of Asian, Black, and Native American females sentenced to prison was less than the average sentenced to probation. However, for White females, the results are reversed. White females have represented an average of around 56% percent of females sentenced to probation and nearly 70 percent of females sentenced to prison.

Chart 4: Average Percentage of Females Sentenced to Prison by Race (2000 – 2021)

We also observe this dynamic when we compare overall sentencing trends with probation and prison sentencing trends by race. From 2000 to 2021, Asian and Black females were overrepresented in terms of parole sentencing compared to their overall sentencing trends and underrepresented in prison sentences. (See Graphs 4-5.) Native American females are overrepresented in the category of parole sentencing compared to their overall sentencing levels. However, their prison sentencing and overall sentencing levels are nearly identical throughout the period. (See Graph 6.) Finally, White females are overrepresented in prison sentencing and underrepresented in parole sentencing. This finding is the opposite of what we find for Asian, Black, and Native American females. (See Graph 7.)

Calculations by the Women's Institute for Science, Equity and Race. Data Source: US Sentencing Commission (USSC)—Monitoring Data Base

### **Ethnicity's Role in Sentencing Trends**

Probation

Incorporating the experiences of Hispanic females helps explain the somewhat irregular trends we find when analyzing the sentencing trends of white females. Hispanic women represented an average of 33 percent of all females sentenced over this period (see Chart 5), while 47 percent of White females were identified as Hispanic. (See Chart 6.)

Chart 5: Average Percentage of Females Sentenced (2000 – 2021) by Ethnicity

Chart 6: Average Percentage of White Females Sentenced (2000 – 2021) by Ethnicity

Calculations by the Women's Institute for Science, Equity and Race. Data Source: US Sentencing Commission (USSC)—Monitoring Data Base

**Graph 8: Percentage of Hispanic Females Sentenced Identified as White (2000 – 2021)** 

Graph 8 shows the percentage of Hispanic females sentenced who were recorded racially as white. At an average of 97 percent, this means that nearly all Hispanic women who were sentenced were identified as white. Consequently, disaggregating the data by race only would misrepresent the sentencing patterns of White and Hispanic women.

Hispanic females are underrepresented in probation sentencing and overrepresented in prison sentencing compared to the percentage of Hispanic females who were sentenced overall. (See Chart 7.)

Chart 7: Average Percentage of Hispanic Females Sentenced (2000 – 2021) by Sentence Type

Calculations by the Women's Institute for Science, Equity and Race. Data Source: US Sentencing Commission (USSC)—Monitoring Data Base

Chart 8: Average Percentage of Non-Hispanic White Females Sentenced (2000 – 2021) by Sentence Type

Calculations by the Women's Institute for Science, Equity and Race. Data Source: US Sentencing Commission (USSC)—Monitoring Data Base

Chart 8 illustrates the average representation of Non-Hispanic White females sentenced overall compared to those who received probation or prison sentences. For both probation and prison sentencing, Non-Hispanic White females were underrepresented compared to the percentage of Non-

Hispanic females who were sentenced overall. This suggests that White Non-Hispanic women are less likely to be sentenced to harsher penalties, allowing them to maintain work and family relationships.

#### **Policy Recommendations**

- 1. Establish independent review boards to analyze federal judges' sentencing patterns for racial and ethnic inconsistencies.
- 2. Simplify penal sentencing codes to remove unnecessary discretion by judges in the type of sentences issued.
- 3. Establish an annual review process to identify inequalities in charges filed by federal prosecutors.

#### **Conclusion**

In part one of this study, we found that arrest and booking trends from 2000 to 2021 were driven by immigration offenses at the federal level and not necessarily drug offenses. We also found that disaggregating the data by citizenship revealed higher arrest patterns for White females. Correcting for this issue, we found much lower rates of arrests for White women. In part two, we find similar patterns of inequality hidden in the aggregated data. At first glance, White females appear to be overrepresented in prison sentencing compared to their general sentencing rates for women. However, once we separate Hispanic from Non-Hispanic White females, we find that Non-Hispanic White females are underrepresented in probation and prison sentencing. To conclude this three-part study, we will investigate the federal prison population for women by race and ethnicity.
